

In paddock dilution and treatment instructions

(Thoroughly shake bottle before mixing)

In Furrow Application:

Shake well and mix **BioEnsure Concentrate (100ml)** with the volume of rainwater or low mineral ground water* used for in furrow fertilizer. Stir well. Apply with fertilizer at a rate equivalent to one vial (100ml) per 200Ha in furrow cotton. If adding **BioTango** place the appropriate amount of powder into fertilizer-**BioEnsure** solution and mix until dissolved. One sachet (40g) of **BioTango** treats 16Ha of cotton in furrow (1g/0.4 Ha).

Foliar Application:

Shake well and mix the 100 ml bottle of **BioEnsure** with the volume of rainwater or low mineral ground water* equivalent to one vial per 200Ha. If using **BioTango** place the appropriate amount of powder into the diluted **BioEnsure** and mix until dissolved. One sachet (40g) of **BioTango** treats 16Ha of cotton via foliar application (1g/0.4 Ha).

*** Do not use town water as it may contain chlorine or fluorine!**

Important Application Notes

- **Diluted BioEnsure solutions, with or without BioTango, must be used within 8 hours of mixing material.**
- **For all applications, do not tank mix with insecticides, herbicides, or fungicides. Do not use with soil fumigants.**
- **Replace BioEnsure cap and refrigerate unused portion. Contents of original bottle must be used within 24 hours after bottle is opened.**

(cont'd)

Please collect treated seed samples in the vials included. KEEP IN A COOL PLACE OUT OF THE SUN! Place in the prepaid envelope and send back to Bridge Environmental (P.O. Box 595, Toowong, QLD, 4066).

We are continually testing for compatibility with other products. If you are able to send sample of original concentrated insecticide, herbicide or fertiliser, noting it's label name and concentration, we can test for its compatibility with **BioEnsure**.
